

sunscreen blinds

made to measure

Melbourne Shade Systems Sunscreen blinds offer a economical solution for keeping the sun off windows. The design is slim-line and suits modern contemporary architecture. The choice of mounting frames can be powder coated to match any colour.

Neat and elegant European design well suited to contemporary architecture.

The Sunscreen Awning is a compact profile design that includes a neat 95 mm or 125 mm aluminium cassette head box, square bottom rail and side channels which can be powder coated to any colour required.

Awning can be fitted inside a recess during construction, thus totally hiding the components from view.

Available in up to 5.4 metre wide with a 3.4 metre drop in a single unit.

Sunscreen Awnings also have the option to run on stainless steel wire guides instead of the channel for a more elegant look. Or even mount the whole unit upside down so the awning can be pulled bottom up with the addition of a Fabric Tensioned System.

Operation is manual through a gearbox or can be fully motorised.

Motorisation further allows individual or group control over a number of windows simultaneously, timer function and climate sensor.

Fabric choices available from Acrylic canvas to various woven and dipped mesh styles. An opaque fabric can be used to provide full block-out, while a sheer fabric can offer sun and heat protection without losing your view.

sunscreen blind on stainless steel rod guides runs bottom-up to shade cathedral window
