sintesi

Airy, solid. **Sintesi** pergola: a compendium of technique and style. Minimal design and efficiency: the new pergola by **FRAMA ACTION**. A totally innovative pergola boasting precise and reliable operation, with overall width and height folding dimensions reduced by minimum 20% compared to current market standards. **Sintesi** matches a svelte

silhouette with heavy duty fabric.

The sliding mechanism is set within the guides span, and is hence concealed by the same when the canvas is fully stretched: aesthetics perfectly and discreetly blends into any setting, both contemporary and traditional, thanks to minimum architectural and landscape impact. **Sintesi** is the ideal solution for both residential and commercial contexts : it broadens indoor space by seamlessly linking it to new outdoor areas.

- Extremely clean lines
- Structure and components made with top quality materials: aluminium and stainless steel (nylon free).
- Standard powder coated structure in 20 different colours.
- Wind resistance up to 100 km/h
- Water runoff class 2 - Minimum gradient 6°
- Standard black out and waterproof PVC

sintesi
GHOST

Sintesi Ghost is the pergola with a mobile roof. **Sintesi Ghost** is designed with movement mechanisms in the lateral guides, and a series of 80x80cm aluminium boxes, each acting as a single storage space for its own portion of fabric, each of which rolls and unrolls independently. The fabric remains tense in whichever position you want to stop the pergola. The global bulk of the movement mechanism remains within the fixed maximum guides dimension of 130mm. **Sintesi Ghost** is free from all the bulk involved in the

usual sort of packing, caused by the folded fabric panels, thus making installation possible even where it would not be possible with an ordinary pergola due to lack of space. The innovation of the system makes it possible to take advantage of using a variety of types of fabric, in order to make the most of the performance of PVC, polyester or microperforated material, thus providing for different chromatic versions as needed, or making it possible to modulate the degree of shade and the filtering of light according to the material chosen for the awning fabric.

- No packing space required
- Structure and components made with top quality materials: aluminium and stainless steel (nylon free).
- Standard powder coated structure in 20 different colours
- Water runoff class 2 - Minimum gradient 8°
- Wind resistance up to 100 km/h
- Standard black out and waterproof PVC

sintesi
QUATTRO

The name **Quattro** derives from its distinctive elements, such as the unique design, and the constant research for technical and aesthetic solutions that combine simplicity with the highest level of innovation and technology.

Made completely of aluminium and steel, **Quattro** is built like a castle made of fitted elements of extruded aluminium, with a standard height of 40cm, which hidden the roof inclination. The versatility of **Quattro** and its special modular system makes it possible to vary the colouring of individual profiles of the castle. The structure can be realized with a single-pitch with one or two openings, or with a double pitch with one opening.

- No visible bolts.
- Hidden inclination hidden by a castle of aluminum profiles.
- Structure and components made with top quality materials: aluminium and stainless steel (nylon free).
- Standard powder coated structure in 20 different colours
- Standard black out and waterproof PVC fabric.

sintesi
SHADE

Sintesi Shade: Self-standing aluminium structure with an essential design. With PVC or micro-perforated fabric and horizontal operation, the purpose of the product is to exclusively provide sun protection, not shelter against rain. Structure and components made with aluminium and steel and available in 20 different colours. Led on box, bidirectional spotlights on columns and speakers with hidden cables and transformers are available. With more than 1 opening, each opening is provided with a fabric. It is possible to realize the wall version, too.

sintesi
GHOST
WINTERGARDEN

Sintesi Ghost is the best solution for existing structures too, thanks to the global bulk of the movement mechanism which remains within 130mm. and the disappearing of each fabric panel into its own single box. Ideal for shading of winter garden or skylights.

sintesi
AIR

Sintesi Air is the hanging Pergola: it is fixed to the wall and supported by steel arches. Elegance and neatness for entrance of public places, hotel and modern structures. It is available with rigid pipes or stainless steel cables which sustain the pergola from above. The wall bracket can sustain both the guides and the cables or pipes above the structure.
